

SCARECROW B.I.R.D. TAB™

(Bird Integrated Reporting & Dispersal)

DISPERSE - RECORD - ANALYSE

What is Scarecrow B.I.R.D. Tab™

Scarecrow B.I.R.D. Tab™ is a dynamic and comprehensive solution to airports' bird dispersal and due diligence needs. This mobile, vehicle-mounted system is designed around international best practices, and is highly customisable for the needs of each individual client.

Scarecrow B.I.R.D. Tab™ is a complete system. A high quality rugged tablet PC is at the heart of the system; together with a pre-loaded processor with up to 20 bird distress calls as selected by the client. Two vehicle roof mounted loudspeakers, mounting kit and a fist microphone for live announcements are all included. Detailed records of dispersal activity can be created easily on-site, and captured data can be transferred wirelessly and in real time to the desktop reporting software for analysis.

Installation and Use

B.I.R.D. Tab™ is a vehicle-mounted system, consisting of a rugged tablet and a set of speakers installed on the roof. The pre-installed software on the tablet allows the user to select and play distress calls for immediate dispersal of birds encountered.

The software also contains powerful data logging and reporting functions, designed around the ICAO recommended best practices. Easily meet your obligations with detailed and auditable records, which can be accessed and analysed through the desktop reporting software.

Bio-acoustic Bird Dispersal

Scarecrow Group is a leading innovator in bio-acoustic bird control technology. Many clients around the world rely on our products to manage bird activity, not just airports but many other industries too; anywhere that the presence of birds can present a hazard or a nuisance.

Scarecrow bio-acoustic bird dispersal systems are completely humane, exploiting natural bird behaviour for their success. Scarecrow uses species-specific distress calls to tell birds that an area is dangerous and they need to leave, while causing little or no noise disturbance to humans.

Features and Specifications

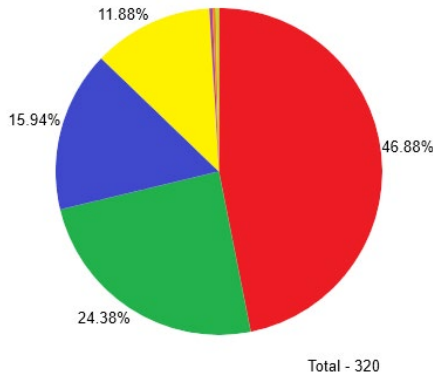

All Wildlifes at LKPR

Dispersals, Observations, Over Flights, Carcass Recovery

Subject: All Species

Sort by: Value (descending)

Count by: Wildlife volume

Scarecrow B.I.R.D. Tab™ Key Features

Detailed Recording: Easily record dispersals, observations, carcass recovery and strike incidents, including species, location and time.

Disperse: Easily select the appropriate distress calls from the tablet for on-the-spot, humane dispersal of birds encountered.

Report Generating: Desktop reporting software allows you to carry out detailed analysis of records and easily create a variety of charts and graphs, allowing you to analyse trends over time and make predictions about future activity.

Customise: Many aspects of the system can be customised for your unique needs. Create custom bird call selections, wildlife records, attractants, and reporting zones for bespoke record-keeping and reporting.

Scarecrow B.I.R.D. Tab™ Technical Information

Standard Features: Vehicle mounted with 20 custom nominated distress calls, GPS receiver, vehicle roof mounted loudspeakers and all system mounting requirements.

Controls: 10" 'rugged use' tablet personal computer with HD daylight readable 10 point multi touch and digitizer screen: up to 1000 nit brightness. Includes camera.

Effective Operational Distance: Approximately 300 meters, influenced by ambient temperature, wind direction, use of output power and reflection from surrounding obstacles.

Power Source: 12 volt supply from vehicle.

Warranty: Standard 3 year return to base warranty with option to extend to full 6 year cover (Please ask for details).

“SCARECROW B.I.R.D. Tab™ is fully prepared and adapted to our airfield conditions. We hope B.I.R.D. Tab™ will become our main helper in wildlife strike prevention.

Latvian NAF Air Force”

About Scarecrow

Since 1984, Scarecrow has been providing the most sophisticated bird dispersal systems throughout the world. Our nature-inspired systems supply the most advanced and reliable solutions for bird control problems of all types, in any sector. Scarecrow's bird management products use bio-acoustic technology, which is the evolutionary communication method used by birds to warn of immediate danger, to disperse birds harmlessly and humanely.

But it doesn't end there. With our parent company, Robin Radar Systems, customers can ensure a thorough grasp on bird activity on and around their site at all times. It enables early detection, and analysis of long-term effects of dispersal, helping optimise policies through the analysis of hard data.

“ Scarecrow B.I.R.D. Tab™ has been instrumental in delivering an 80% reduction in airfield bird sightings and a resulting reduction in controllable species bird strikes of over 90%.
London Luton Airport ”

“ I would recommend the scarecrow system as over the years it has been very effective in keeping the helideck clear of seagulls.
Wood Group PSN, Aberdeen ”
