# What is Scarecrow Patrol Two?

Scarecrow Patrol Two represents an evolutionary development in bio-acoustic bird dispersal and control, designed for use anywhere that accurate and effective bird control is required – small airfields, beaches, at sea, landfill sites, bridge structures, public buildings, docks and harbours, fruit farms and agriculture, food processing and storage facilities, outdoor restaurants.

Scarecrow Patrol Two is fully portable, hand held, and contains nine digitally stored distress calls. Standard calls can be exchanged for other species from our call library by special order.

## Compact but Complete

Scarecrow Patrol Two is completely self-contained, includes shower proof carrybag with a zipped compartment for spare batteries and is supplied with a comprehensive operator's manual.

Each call is selected by a simple rotary switch; the benefits of digital storage are uniquely strengthened by the fact that each distress call is reproduced with excellent fidelity from its natural start.

In addition, Scarecrow Patrol Two can be used as an attention-getting 'whistle' and for 'live' voice messaging, with a range of up to 350 metres.

## Bio-Acoustic Bird Dispersal

Scarecrow Group is a leading innovator in bio-acoustic bird control technology. Many clients around the world rely on our products to manage bird activity, including airports, parks and farms; anywhere that the presence of birds can present a hazard or a nuisance.

Scarecrow bio-acoustic bird dispersal systems are completely humane, exploiting natural bird behaviour for their success. Scarecrow uses species-specific distress calls to tell birds that an area is dangerous and they need to leave, while causing little or no noise disturbance to humans.

# Features and Specifications

## Key features of Scarecrow Patrol Two

- Handheld solution for mobile patrols.
- High-fidelity playback of bird distress calls.
- Can be used for live voice announcements.
- Attention-getting whistle.
- Nine standard calls included.
- Customisable distress call list.
- Perfect for use where fixed systems are not suitable.

## Scarecrow Patrol Two Technical Information

**System includes:** Handheld unit, shower-proof carrybag.

**Controls:** Operational trigger – start of selected use; Select – bird dispersal or voice announcement Sound level adjustment; Push button, overriding, whistle.

**Distress Calls:** 9 standard calls, which can be exchanged for a custom selection if necessary.

**Whistle:** Intermittent use totalling 90 minutes.

**Power Source:** 6 'C' size primary alkaline (9 volt total).

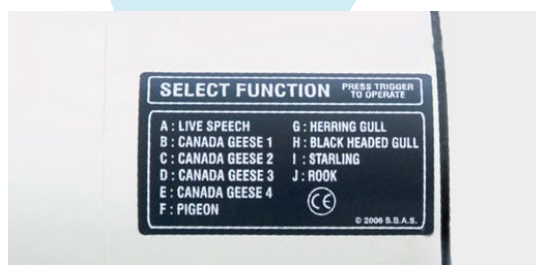

**Body Composition:** Fire retardant, shatter resistant ABS resin, ivory colour.

**Dimensions:** 210mm max horn diameter, 320mm total length.

**Unit weight:** 1.5kg including power cells.

**Warranty:** Standard 12 month return to base warranty.

**Order Code:** 1307.

## Scarecrow Goose Patrol

Many of the types of sites that would benefit from a Scarecrow Patrol have a particular problem with geese, so we offer a specialised solution off the shelf.

The Scarecrow Goose Patrol is physically identical to the Scarecrow Patrol but the standard call list includes four effective Canada goose calls, together with five other common calls. The order code is 1309.

“The Patrol 2 unit is perfect for our survey work; it is lightweight and its variable volume makes it very versatile for a number of survey situations.  
**Senior Conservation Officer, South East Regional Office**  
**Royal Society for the Protection of Birds (RSPB)**”

## About Scarecrow

Since 1984, Scarecrow has been providing the most sophisticated bird dispersal systems throughout the world. Our nature-inspired systems supply the most advanced and reliable solutions for bird control problems of all types, in any sector. Scarecrow's bird management products use bio-acoustic technology, which is the evolutionary communication method used by birds to warn of immediate danger, to disperse birds harmlessly and humanely.

But it doesn't end there. With our parent company, Robin Radar Systems, customers can ensure a thorough grasp on bird activity on and around their site at all times. It enables early detection, and analysis of long-term effects of dispersal, helping optimise policies through the analysis of hard data.

“ Scarecrow B.I.R.D. Tab™ has been instrumental in delivering an 80% reduction in airfield bird sightings and a resulting reduction in controllable species bird strikes of over 90%.  
**London Luton Airport** ”

“ I would recommend the scarecrow system as over the years it has been very effective in keeping the helideck clear of seagulls.  
**Wood Group PSN, Aberdeen** ”
